

Integrated approach to Risk Management

Bowtie methodology

Public Training workshop

25th to 27th April 2024

(Two and half days)

Training Location: - Bengaluru

Course facilitators

Anantha Prasad S

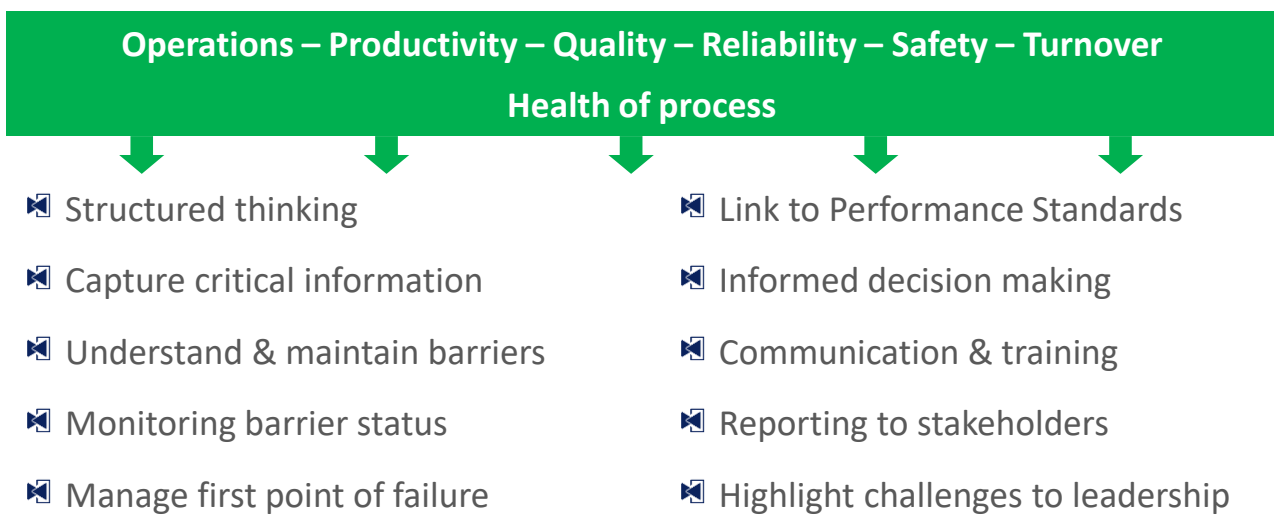

Barrier based risk management and bowties

Barrier based risk models, and in particular Bowtie diagrams, are increasingly used to assess and measure key risks that can influence your critical business processes. Process disruptions can have an effect on efficiency, safety, quality or reputation. For many years the Bowtie method and BowTieXP software tool have been used by many companies from a variety of industries in oil & gas, chemicals, mining, maritime, energy, military, government, aviation, transport, pipelines, healthcare and finance sectors.

A Bowtie diagram is not just a static picture useful to visually communicate your risks. The barrier based risk management model can be also be used for verification and for compliance. For these purposes existing data is used coming from audits, inspections and incident analysis. Furthermore data is used related to required competencies (for maintaining barriers), ongoing or planned maintenance, performance standards, external conditions – or even a DCS system. This is what we call “**advanced barrier management**”.

Benefits of attending this course

At the end of the workshop, participants will have a thorough understanding of risk perception & risk management in various spheres of industrial operations as illustrated below
